

Best in Class

EXCLUSIVELY FROM BECKER  
BECKER GENUINE  
GREASE

### Use Only Becker Genuine Grease

Since bearings are the most vulnerable moving part in all rotating equipment, why risk failures due to overheating? Becker bearing grease is specifically designed for Becker dry running vane pumps. Other greases are not designed to stand up to the high heat generated by bearings in an oil-less vacuum pump or compressor. We offer various sizes for various needs, including our most economical and easy to use Zerk Grease Gun Assembly with Canister.

### Why you should choose Becker Grease

- Withstands the high temperatures generated by carbon vane pump bearings
- Resists moisture, oxidation, and aging
- Protects against corrosion
- Extends the intervals between services
- Covers a wide service temperature range from -5 °F to 302 °F

### Available in 6 convenient sizes

Size	Becker Part Number
